Topic: Adding disk to an Asm. disk group :-

Prasanna

Select the disk group from the list of Disk group
Right click on selected disk group

53

OK: (select the disk to add to disk group)

Now we can see that size of disk group has increased

External Redundancy:-

→ No mirroring at as Asm level / SW level (If we have mirroring at H/W level).

Normal Redundancy:- (At least 2 disk). $\text{Total size} / 2 = \text{total size of disk group}$

→ 2 way mirroring at Asm level.

High Redundancy:- (Total size divided (disks) / 3) = Total size of that disk group

→ ^{APP} Which cannot afford data loss.
