Topic:- How to perform simple backup and recovery using RMAN:-

> \$ Export ORACLE_SID = ORCL.

27

> \$ rman target /

RMAN> report need backup;

RMAN> show all;

RMAN> backup database; (full backup of the database)

RMAN> shutdown abort;

Now, Delete all database files, at O/S level manually
i.e. CRD files, (not delete the folder/pir)
Temp files
Undo files

> \$ rman target /

RMAN> startup nomount; (because SPfile/Pfile is still available)

RMAN> restore controlfile from 'post rman backup';

RMAN> alter database mount;

RMAN> restore database; (Redolog file will not be seen it will

RMAN> recover database;

RMAN> alter database open resetlogs; (be the once we open the db with resetlog)

< ~~alter~~ database opened >
